

15 shells of 1 mm at the real barrel-layer radii, $\rho = 9 \text{ g/cm}^3$, $Z = 8$, $A = 16$ — vacuum in between
solid red = the 14 scoring planes ($r = 4.2\text{--}106.8 \text{ cm}$) · dashed grey = the double-sided partner at 27.1 cm, not scored

transverse — μ , $p_T = 3 \text{ GeV}$, $R = 2.63 \text{ m}$

longitudinal — barrel only, $|z| < 194 \text{ cm}$
